

Android Developer

As an Android Developer, you'll spend most of your time:

- - Designing, developing and testing advanced native applications for the Android platform
 - Ensuring the best possible performance, quality and responsiveness of the application
 - Working on bug fixing, improving application performance and maintaining code quality
 - Collaborating with the rest of the engineering team to design and launch new features
 - Creating interfaces that integrate web applications seamlessly into the mobile experience
 - Working closely with the leadership team to define roadmap and development plans

Qualifications:

- - 3+ Experience in Android application development (We are eager to know if you have already written a few cool apps that you can't wait to show us)
 - Proficient in Android SDK and Java, with a good knowledge of its ecosystems
 - Experience working with remote data via REST and JSON
 - Experience with third-party libraries, APIs and with use of additional sensors
 - Knowledge of Android UI design principles, patterns, and best practices
 - Passion about learning and professional development
 - Ability to adapt and understand Agile and Scrum methodologies.
 - Good spoken and written English
